3. What the analyst is asserting

This is the argued text behind this row's ANALYST numbers, quoted verbatim from sea2027/judgment.py. It is not a measurement, and it is the first thing to disagree with.

Parameter	Value	Parameter	Value
conflict	0.00	ip_exit	0.18
crony	0.70	whitecollar	0.45
unrest	0.00	haven	0.25
polar	0.10	phys_share	0.85
party_frag	0.02	counter	0.04
social_frag	0.20	lux	0.10
protest	0.04	pension	0.55
labour_exit	0.60	ext_threat	0.12

A hydrocarbon rentier monarchy with the region's lowest political temperature and its most exposed single-commodity revenue base. crony is high not through lobbying but through fusion: royal household, sovereign fund and state are not separable, which is the PACI construct at its purest. polar and party_frag are near zero because there is no legislature to fragment. The live risk is s1 and s5, not s2 or c5 - 2025 growth of 0.7% on a maturing field base, and the first sustained oil undershoot converts straight into an L6 squeeze with no tax instrument to fall back on.

4. The θ_{25} gates

Component	Level	Drift/yr	Threshold	Years	Status
s3	0.751	-0.0057	0.30 [PAPER]	79.6	open
s5	0.700	-0.0044	0.15 [PAPER]	126.4	open
c5	0.122	+0.0022	0.50 [FREE]	172.9	open
s2	0.895	-0.0006	0.25 [PAPER]	1011.2	open

s5 — theta25 threshold gate - uncommitted revenue horizon. Degrow's voluntary/aging terminus.

s2 — theta25 threshold gate - coercive monopoly. Degrow's violent/youth terminus.

s3 — sccd loop L2 explosive threshold - the legitimacy death spiral becomes self-sustaining below this.

c5 — sccd loop L3 polarisation-trap threshold. NOTE this one is a FREE parameter in the source paper - no numeric value is given anywhere in Parts I-V - so the crossing date is arbitrary in a way the S2/S5/S3 gates are not.

5. The eight feedback loops

Trajectory is a STRUCTURAL SCENARIO. Every coefficient in the six new state equations is ANALYST (spec2) and most in the original four are FREE (sccd.spec). Read curve ORDERING, slope SIGNS, and PAPER-threshold crossings. Do not read levels or dates.

11. The 15-year pass: order the gates close in

2041: **Hegemonic / Coherent** · Ψ 1.330 · θ₂₅ 1.000 · Δ_norm +0.163 · R_B 0 · none

s3 80y → s5 126y → c5 173y → s2 1011y

12. Epistemic limits

CALIBRATION TAGS. CALIBRATED (PAPER parameters only): lambda, theta25, S, the regime band, Psi, L1/L2 activation, R_B, Gamma. UNCALIBRATED (at least one FREE/ANALYST parameter): C and therefore Delta and Delta_norm; L3/L4 activation; ALL of L5-L8; CAI; every trajectory; every gate projection; the attractor choice.

No OAT +/-20% perturbation flipped the verdict. That is robustness against PARAMETER error only - it says nothing about whether the model structure or the input levels are right.

sccd Part V 1, verbatim: 'We do not, at this stage, claim predictive precision - generating quantitatively accurate forecasts from an incompletely calibrated formal model would be epistemically irresponsible. The validation standard is qualitative-structural.' The v2 layer is strictly weaker than that again, since all 46 of its parameters are ANALYST.
