MEASURED = every term came from a dated observation. MIXED = a measured composite gated or shifted by an argued term. ANALYST = no usable series exists for this polity.

3. What the analyst is asserting

This is the argued text behind this row's ANALYST numbers, quoted verbatim from sea2027/judgment.py. It is not a measurement, and it is the first thing to disagree with.

Parameter	Value	Parameter	Value
conflict	0.14	ip_exit	0.30
crony	0.80	whitecollar	0.38
unrest	0.26	haven	0.66
polar	0.52	phys_share	0.88
party_frag	0.45	counter	0.08
social_frag	0.60	lux	0.18
protest	0.85	pension	0.40
labour_exit	0.45	ext_threat	0.20

unrest 0.26 is the largest penalty applied to any s3 here and it is the most consequential single ANALYST number in the file. V-Dem's 2025 liberal-democracy score of 0.296 is already a decade low, and the 2025-26 protest wave - cost of living, layoffs, legislators' allowances, police violence, then the free-meals poisonings and the June 2026 fuel-price round - sits ON TOP of that reading rather than inside it. protest 0.85 because those mobilisations repeatedly forced policy reversals, and coordination EFFECTIVENESS is what P.11 asks for. haven 0.66 is the firmest Block A number in the set: 38.1t of bar and coin in H1 2026, more than Thailand and Vietnam combined, +40% y/y, with the WGC's own attribution being currency weakness and concerns about the domestic outlook. polar sits below what party_frag would imply because Prabowo holds an oversized coalition - the split is street-against-elite, not legislative.

4. The θ25 gates

Component	Level	Drift/yr	Threshold	Years	Status
s3	0.297	-0.0080	0.30 [PAPER]	CROSSED	CROSSED
c5	0.522	+0.0048	0.50 [FREE]	CROSSED	CROSSED
s2	0.603	-0.0052	0.25 [PAPER]	68.4	open
s5	0.662	-0.0040	0.15 [PAPER]	127.2	open

s5 — theta25 threshold gate - uncommitted revenue horizon. Degrow's voluntary/aging terminus.

s2 — theta25 threshold gate - coercive monopoly. Degrow's violent/youth terminus.

s3 — sccd loop L2 explosive threshold - the legitimacy death spiral becomes self-sustaining below this.

c5 — sccd loop L3 polarisation-trap threshold. NOTE this one is a FREE parameter in the source paper - no numeric value is given anywhere in Parts I-V - so the crossing date is arbitrary in a way the S2/S5/S3 gates are not.

5. The eight feedback loops

CAI_core (L1–L4) = 1.0 (manageable) · CAI_ext (L1–L8) = 2.0 (manageable)

Measurement SD used for this pass, in normalised units: s1 0.06, s2 0.1, s3 0.13, s4 0.07, s5 0.07, c1 0.1, c2 0.07, c3 0.05, c4 0.07, c5 0.13. The two largest are s3 and c5 — s3 is sccd's own highest-risk proxy and is BLOCKED, and c5 is fully ANALYST for all eleven polities.

8. OAT fragility at ±20%

3 of 42 parameters flip the qualitative verdict at ±20%, the perturbation sccd eq (SA) mandates.

currency_crisis Currency crisis / reserve drain	0.40	s1-0.048 s5-0.048 c4+0.032 a4+0.064

Why these events, and why not others

a breach of the 3% deficit cap crystallising the Moody's negative outlook, plus rupiah pressure. Neither is in the baseline; the protests already are.

12. Epistemic limits

CALIBRATION TAGS. CALIBRATED (PAPER parameters only): lambda, theta25, S, the regime band, Psi, L1/L2 activation, R_B, Gamma. UNCALIBRATED (at least one FREE/ANALYST parameter): C and therefore Delta and Delta_norm; L3/L4 activation; ALL of L5-L8; CAI; every trajectory; every gate projection; the attractor choice.

3 parameter(s) flip the qualitative verdict under the +/-20% OAT perturbation sccd eq (SA) mandates: d5_violent_thresh, a4_flight_thresh, L3_revpol_thresh. A verdict that moves under a 20% nudge to an ANALYST coefficient is a hypothesis, not a finding. Read `fragility` before quoting anything.

S3 is the highest-risk proxy in sccd Part III 2.3 and it is low here. Everything lambda touches - which is all of S - inherits that uncertainty. Widen accordingly.

> sccd Part V 1, verbatim: 'We do not, at this stage, claim predictive precision - generating quantitatively accurate forecasts from an incompletely calibrated formal model would be epistemically irresponsible. The validation standard is qualitative-structural.' The v2 layer is strictly weaker than that again, since all 46 of its parameters are ANALYST.
