`dΔ/dt = -0.0063 (measured over first 3 yr of trajectory)` · `decoupling_active = False` · `decoupling_index = 0.000`

d3 low, d5 high - no voluntary instruments and a large cohort with no stake. Degrow's ancient path. Terminal gate: S2 falling through theta25's 0.25 floor.

3. What the analyst is asserting

This is the argued text behind this row's ANALYST numbers, quoted verbatim from sea2027/judgment.py. It is not a measurement, and it is the first thing to disagree with.

Parameter	Value	Parameter	Value
conflict	0.05	ip_exit	0.12
crony	0.75	whitecollar	0.14
unrest	0.10	haven	0.58
polar	0.14	phys_share	0.90
party_frag	0.04	counter	0.03
social_frag	0.35	lux	0.05
protest	0.07	pension	0.15
labour_exit	0.46	ext_threat	0.10

> The clearest L6 case in the region on measured numbers alone. The IMF's February 2026 Article IV calls public debt unsustainable and the country in external and overall debt distress even as the ratio falls; inflation returned to about 10% by April 2026; and the US State Department's 2026 statement holds that IMF figures undercount the liabilities to China. Social protection covers 2.2% of the population. haven 0.58 because two episodes of 20-30% inflation inside four years teach a household what the kip is worth. unrest 0.10 rather than zero: there is no protest channel, so the legitimacy drawdown surfaces as exit and informality instead.

4. The θ25 gates

Component	Level	Drift/yr	Threshold	Years	Status
s3	0.368	-0.0117	0.30 [PAPER]	5.8	open
c5	0.190	+0.0141	0.50 [FREE]	22.0	open

s5	0.599	-0.0012	0.15 [PAPER]	362.9	open

s5 — theta25 threshold gate - uncommitted revenue horizon. Degrow's voluntary/aging terminus.

s2 — theta25 threshold gate - coercive monopoly. Degrow's violent/youth terminus.

s3 — sccd loop L2 explosive threshold - the legitimacy death spiral becomes self-sustaining below this.

c5 — sccd loop L3 polarisation-trap threshold. NOTE this one is a FREE parameter in the source paper - no numeric value is given anywhere in Parts I-V - so the crossing date is arbitrary in a way the S2/S5/S3 gates are not.

5. The eight feedback loops

Trajectory is a STRUCTURAL SCENARIO. Every coefficient in the six new state equations is ANALYST (spec2) and most in the original four are FREE (sccd.spec). Read curve ORDERING, slope SIGNS, and PAPER-threshold crossings. Do not read levels or dates.

11. The 15-year pass: order the gates close in

12. Epistemic limits

CALIBRATION TAGS. CALIBRATED (PAPER parameters only): lambda, theta25, S, the regime band, Psi, L1/L2 activation, R_B, Gamma. UNCALIBRATED (at least one FREE/ANALYST parameter): C and therefore Delta and Delta_norm; L3/L4 activation; ALL of L5-L8; CAI; every trajectory; every gate projection; the attractor choice.

1 parameter(s) flip the qualitative verdict under the +/-20% OAT perturbation sccd eq (SA) mandates: a4_flight_thresh. A verdict that moves under a 20% nudge to an ANALYST coefficient is a hypothesis, not a finding. Read `fragility` before quoting anything.

S3 is the highest-risk proxy in sccd Part III 2.3 and it is low here. Everything lambda touches - which is all of S - inherits that uncertainty. Widen accordingly.

> sccd Part V 1, verbatim: 'We do not, at this stage, claim predictive precision - generating quantitatively accurate forecasts from an incompletely calibrated formal model would be epistemically irresponsible. The validation standard is qualitative-structural.' The v2 layer is strictly weaker than that again, since all 46 of its parameters are ANALYST.
