3. What the analyst is asserting

This is the argued text behind this row's ANALYST numbers, quoted verbatim from sea2027/judgment.py. It is not a measurement, and it is the first thing to disagree with.

Parameter	Value	Parameter	Value
conflict	0.95	ip_exit	0.10
crony	0.85	whitecollar	0.12
unrest	0.15	haven	0.78
polar	0.85	phys_share	0.92
party_frag	0.80	counter	0.03
social_frag	0.85	lux	0.04
protest	0.55	pension	0.20
labour_exit	0.58	ext_threat	0.95

conflict 0.95 is not a claim about who is winning; it is the statement that no actor holds a monopoly. BTI 2026 puts junta authority as contested in over two thirds of the territory with more than half of 330 townships in active conflict; stable Tatmadaw control was put at 72-220 of 330 townships as of December 2025; the Arakan Army holds most of Rakhine; three regional commands have fallen. The December 2025 phased election changed the legal claim, not the control map. unrest is only 0.15, and deliberately so: WGI 2025 and V-Dem 2025 already price the collapse in full - government effectiveness at the 19th percentile, liberal-democracy 0.015, the lowest of the eleven - so a larger drawdown would charge the coup twice. haven 0.78 at phys_share 0.92: 22% inflation in 2025 and a kyat no one holds voluntarily. This row exists to test whether loop L8 fires where it should.

4. The θ25 gates

Component	Level	Drift/yr	Threshold	Years	Status
s2	0.161	-0.0061	0.25 [PAPER]	CROSSED	CROSSED
s3	0.139	-0.0091	0.30 [PAPER]	CROSSED	CROSSED
c5	0.820	+0.0068	0.50 [FREE]	CROSSED	CROSSED
s5	0.480	-0.0031	0.15 [PAPER]	106.2	open

s5 — theta25 threshold gate - uncommitted revenue horizon. Degrow's voluntary/aging terminus.

s2 — theta25 threshold gate - coercive monopoly. Degrow's violent/youth terminus.

s3 — sccd loop L2 explosive threshold - the legitimacy death spiral becomes self-sustaining below this.

c5 — sccd loop L3 polarisation-trap threshold. NOTE this one is a FREE parameter in the source paper - no numeric value is given anywhere in Parts I-V - so the crossing date is arbitrary in a way the S2/S5/S3 gates are not.

5. The eight feedback loops

CAI_core (L1–L4) = 2.0 (manageable) · CAI_ext (L1–L8) = 3.0 (manageable)

Measurement SD used for this pass, in normalised units: s1 0.06, s2 0.1, s3 0.13, s4 0.07, s5 0.07, c1 0.1, c2 0.07, c3 0.05, c4 0.07, c5 0.13. The two largest are s3 and c5 — s3 is sccd's own highest-risk proxy and is BLOCKED, and c5 is fully ANALYST for all eleven polities.

8. OAT fragility at ±20%

2 of 42 parameters flip the qualitative verdict at ±20%, the perturbation sccd eq (SA) mandates.

Why these events, and why not others

relief-system failure and a further currency break. The war itself is baseline - adding civil_conflict would charge the coup twice.

t=0.00 Equilibrium / Incoherent

Trajectory is a STRUCTURAL SCENARIO. Every coefficient in the six new state equations is ANALYST (spec2) and most in the original four are FREE (sccd.spec). Read curve ORDERING, slope SIGNS, and PAPER-threshold crossings. Do not read levels or dates.

s2 below 0.25 [PAPER] @ t=0.00 (already past at t0) — theta25 gate closes - Degrow violent/youth terminus

s3 below 0.3 [PAPER] @ t=0.00 (already past at t0) — sccd L2 legitimacy death spiral becomes explosive

psi below 0.4 [PAPER] @ t=0.00 (already past at t0) — sccd Psi_crit - R_B coherence condition trips

s2 CROSSED → s3 CROSSED → c5 CROSSED → s5 106y

12. Epistemic limits

Degrow's two adjustment channels terminate in the same object - theta25 - through different gates: voluntary/aging closes S5 (crit 0.15, PAPER), violent/youth closes S2 (crit 0.25, PAPER). Both drive Psi -> 0 via Psi = lambda*theta25*(1-C5), tripping R_B's third condition.

CALIBRATION TAGS. CALIBRATED (PAPER parameters only): lambda, theta25, S, the regime band, Psi, L1/L2 activation, R_B, Gamma. UNCALIBRATED (at least one FREE/ANALYST parameter): C and therefore Delta and Delta_norm; L3/L4 activation; ALL of L5-L8; CAI; every trajectory; every gate projection; the attractor choice.

2 parameter(s) flip the qualitative verdict under the +/-20% OAT perturbation sccd eq (SA) mandates: d5_violent_thresh, L3_revpol_thresh. A verdict that moves under a 20% nudge to an ANALYST coefficient is a hypothesis, not a finding. Read `fragility` before quoting anything.

S3 is the highest-risk proxy in sccd Part III 2.3 and it is low here. Everything lambda touches - which is all of S - inherits that uncertainty. Widen accordingly.

> sccd Part V 1, verbatim: 'We do not, at this stage, claim predictive precision - generating quantitatively accurate forecasts from an incompletely calibrated formal model would be epistemically irresponsible. The validation standard is qualitative-structural.' The v2 layer is strictly weaker than that again, since all 46 of its parameters are ANALYST.
