3. What the analyst is asserting

This is the argued text behind this row's ANALYST numbers, quoted verbatim from sea2027/judgment.py. It is not a measurement, and it is the first thing to disagree with.

Parameter	Value	Parameter	Value
conflict	0.05	ip_exit	0.50
crony	0.75	whitecollar	0.55
unrest	0.14	haven	0.44
polar	0.70	phys_share	0.70
party_frag	0.72	counter	0.08
social_frag	0.75	lux	0.20
protest	0.50	pension	0.45
labour_exit	0.60	ext_threat	0.20

social_frag 0.75 is the highest non-Myanmar value and it is structural rather than episodic - the cleavage is communal and constitutionally entrenched, not a swing of opinion. party_frag 0.72 on a grand coalition that has now lost Sabah, Johor and Negeri Sembilan at state level while holding the federal centre, with GE16 due by February 2028 and Anwar publicly weighing an early call. unrest 0.14 for the subsidy-rationalisation cost-of-living channel plus the collapse of the Zahid prosecution, which is the exact mechanism sccd's L_comply pillar is about. pension only 0.45 because the EPF is funded rather than PAYG - Malaysia's ageing bill lands on households, not on the budget.

4. The θ25 gates

Component	Level	Drift/yr	Threshold	Years	Status
c5	0.714	+0.0017	0.50 [FREE]	CROSSED	CROSSED
s3	0.576	-0.0074	0.30 [PAPER]	37.2	open
s5	0.519	-0.0045	0.15 [PAPER]	82.8	open
s2	0.762	-0.0014	0.25 [PAPER]	368.6	open

s5 — theta25 threshold gate - uncommitted revenue horizon. Degrow's voluntary/aging terminus.

s2 — theta25 threshold gate - coercive monopoly. Degrow's violent/youth terminus.

s3 — sccd loop L2 explosive threshold - the legitimacy death spiral becomes self-sustaining below this.

c5 — sccd loop L3 polarisation-trap threshold. NOTE this one is a FREE parameter in the source paper - no numeric value is given anywhere in Parts I-V - so the crossing date is arbitrary in a way the S2/S5/S3 gates are not.

5. The eight feedback loops

CAI_core (L1–L4) = 1.0 (manageable) · CAI_ext (L1–L8) = 1.0 (manageable)

Loop		Detail
L1 Regulatory Capture Accelerator	**off**	C1=0.66 vs crit 0.70 (under); S2=0.76 vs crit 0.60 (above)

t=0.00 Negotiated / Coherent

Trajectory is a STRUCTURAL SCENARIO. Every coefficient in the six new state equations is ANALYST (spec2) and most in the original four are FREE (sccd.spec). Read curve ORDERING, slope SIGNS, and PAPER-threshold crossings. Do not read levels or dates.

11. The 15-year pass: order the gates close in

2041: **Negotiated / Coherent** · Ψ 0.402 · θ₂₅ 0.997 · Δ_norm +0.125 · R_B 0 · L3

c5 CROSSED → s3 37y → s5 83y → s2 369y

12. Epistemic limits

CALIBRATION TAGS. CALIBRATED (PAPER parameters only): lambda, theta25, S, the regime band, Psi, L1/L2 activation, R_B, Gamma. UNCALIBRATED (at least one FREE/ANALYST parameter): C and therefore Delta and Delta_norm; L3/L4 activation; ALL of L5-L8; CAI; every trajectory; every gate projection; the attractor choice.

No OAT +/-20% perturbation flipped the verdict. That is robustness against PARAMETER error only - it says nothing about whether the model structure or the input levels are right.

> sccd Part V 1, verbatim: 'We do not, at this stage, claim predictive precision - generating quantitatively accurate forecasts from an incompletely calibrated formal model would be epistemically irresponsible. The validation standard is qualitative-structural.' The v2 layer is strictly weaker than that again, since all 46 of its parameters are ANALYST.
