$\hat{S}_2$	0.594	0.592	-0.002	coercive monopoly
d_4	0.592	0.599	+0.006	dependency inversion

dΔ/dt = -0.0072 (measured over first 3 yr of trajectory) · decoupling_active = False · decoupling_index = 0.017

d3 high, d5 low - pressure discharges through fertility refusal and then dependency inversion. Degrow's modern path. Terminal gate: S5 falling through theta25's 0.15 floor.

3. What the analyst is asserting

This is the argued text behind this row's ANALYST numbers, quoted verbatim from sea2027/judgment.py. It is not a measurement, and it is the first thing to disagree with.

Parameter	Value	Parameter	Value
conflict	0.25	ip_exit	0.40
crony	0.85	whitecollar	0.42
unrest	0.18	haven	0.56
polar	0.80	phys_share	0.85
party_frag	0.75	counter	0.10
social_frag	0.55	lux	0.35
protest	0.65	pension	0.70
labour_exit	0.35	ext_threat	0.45

The region's demographic outlier and therefore its Block D test case: old-age dependency 23.0 and TFR 1.2 at $26,250 PPP per head - Japan's age structure on a quarter of Japan's income. pension 0.70, the highest here, because the commitment is already legislated (universal health coverage plus the old-age allowance) while formal pension coverage is 4.5%, so the burden falls on general revenue. Against that, the IMF's own October 2026 vintage has debt rising 64.7 to 67.8% of GDP by 2027 on growth of 1.5% in 2026 and 2.1% in 2027, the weakest pair in the region. polar 0.80: the 8 February 2026 election gave Bhumjaithai 192 of 500 and left the royalist-reformist cleavage intact, and by 8 October 2026 the People's Party was collecting signatures for an Article 151 motion naming twelve ministers including the Prime Minister over the Senate-selection scandal. ext_threat 0.45 for the Cambodian border.

4. The θ25 gates

Component	Level	Drift/yr	Threshold	Years	Status
c5	0.692	+0.0012	0.50 [FREE]	CROSSED	CROSSED

s2	0.594	-0.0017	0.25 [PAPER]	207.6	open

s5 — theta25 threshold gate - uncommitted revenue horizon. Degrow's voluntary/aging terminus.

s2 — theta25 threshold gate - coercive monopoly. Degrow's violent/youth terminus.

s3 — sccd loop L2 explosive threshold - the legitimacy death spiral becomes self-sustaining below this.

c5 — sccd loop L3 polarisation-trap threshold. NOTE this one is a FREE parameter in the source paper - no numeric value is given anywhere in Parts I-V - so the crossing date is arbitrary in a way the S2/S5/S3 gates are not.

Why these events, and why not others

the Article 151 motion resolving against the government, plus the pension commitment failing rather than being reformed. pension=0.70 is the size of the commitment, not its failure.

Trajectory is a STRUCTURAL SCENARIO. Every coefficient in the six new state equations is ANALYST (spec2) and most in the original four are FREE (sccd.spec). Read curve ORDERING, slope SIGNS, and PAPER-threshold crossings. Do not read levels or dates.

CALIBRATION TAGS. CALIBRATED (PAPER parameters only): lambda, theta25, S, the regime band, Psi, L1/L2 activation, R_B, Gamma. UNCALIBRATED (at least one FREE/ANALYST parameter): C and therefore Delta and Delta_norm; L3/L4 activation; ALL of L5-L8; CAI; every trajectory; every gate projection; the attractor choice.

5 parameter(s) flip the qualitative verdict under the +/-20% OAT perturbation sccd eq (SA) mandates: d3_voluntary_thresh, d4_inversion_thresh, d2_trap_thresh, a4_flight_thresh, L3_revpol_thresh. A verdict that moves under a 20% nudge to an ANALYST coefficient is a hypothesis, not a finding. Read `fragility` before quoting anything.

S3 is the highest-risk proxy in sccd Part III 2.3 and it is low here. Everything lambda touches - which is all of S - inherits that uncertainty. Widen accordingly.

> sccd Part V 1, verbatim: 'We do not, at this stage, claim predictive precision - generating quantitatively accurate forecasts from an incompletely calibrated formal model would be epistemically irresponsible. The validation standard is qualitative-structural.' The v2 layer is strictly weaker than that again, since all 46 of its parameters are ANALYST.
