dΔ/dt = -0.0089 (measured over first 3 yr of trajectory) · decoupling_active = False · decoupling_index = 0.000

d3 low, d5 high - no voluntary instruments and a large cohort with no stake. Degrow's ancient path. Terminal gate: S2 falling through theta25's 0.25 floor.

3. What the analyst is asserting

This is the argued text behind this row's ANALYST numbers, quoted verbatim from sea2027/judgment.py. It is not a measurement, and it is the first thing to disagree with.

Parameter	Value	Parameter	Value
conflict	0.08	ip_exit	0.10

> The freest polity in the set on every civic measure - RSF 30th of 180, ahead of every other ASEAN member and most of Europe; V-Dem liberal-democracy 0.549, nearly double Indonesia's - and the poorest by a wide margin at $4,810 PPP per head, with NEET at 29.1% and youth dependency 53.7, the highest in the region. That pairing is why the row matters: high c2 and c3 with low s1 and high d5. The binding fact is that the Petroleum Fund, not tax, pays for the state, so s1 and s5 are about the Fund's drawdown path and almost nothing else. ASEAN accession on 26 October 2025 raises opportunity and labour_exit over the next decade but changes no 2027 input. crony 0.50, the lowest here, because there is not yet enough private capital to concentrate.

4. The θ25 gates

Component	Level	Drift/yr	Threshold	Years	Status
c5	0.452	+0.0150	0.50 [FREE]	3.2	open
s3	0.586	-0.0130	0.30 [PAPER]	22.0	open

s5	0.714	-0.0030	0.15 [PAPER]	188.7	open

s5 — theta25 threshold gate - uncommitted revenue horizon. Degrow's voluntary/aging terminus.

s2 — theta25 threshold gate - coercive monopoly. Degrow's violent/youth terminus.

s3 — sccd loop L2 explosive threshold - the legitimacy death spiral becomes self-sustaining below this.

c5 — sccd loop L3 polarisation-trap threshold. NOTE this one is a FREE parameter in the source paper - no numeric value is given anywhere in Parts I-V - so the crossing date is arbitrary in a way the S2/S5/S3 gates are not.

5. The eight feedback loops

Trajectory is a STRUCTURAL SCENARIO. Every coefficient in the six new state equations is ANALYST (spec2) and most in the original four are FREE (sccd.spec). Read curve ORDERING, slope SIGNS, and PAPER-threshold crossings. Do not read levels or dates.

11. The 15-year pass: order the gates close in

2041: **Equilibrium / Incoherent** · Ψ 0.219 · θ_{25} 0.995 · Δ_norm +0.079 · R_B 0 · none

c5 3y → s3 22y → s2 34y → s5 189y

12. Epistemic limits

CALIBRATION TAGS. CALIBRATED (PAPER parameters only): lambda, theta25, S, the regime band, Psi, L1/L2 activation, R_B, Gamma. UNCALIBRATED (at least one FREE/ANALYST parameter): C and therefore Delta and Delta_norm; L3/L4 activation; ALL of L5-L8; CAI; every trajectory; every gate projection; the attractor choice.

No OAT +/-20% perturbation flipped the verdict. That is robustness against PARAMETER error only - it says nothing about whether the model structure or the input levels are right.

> sccd Part V 1, verbatim: 'We do not, at this stage, claim predictive precision - generating quantitatively accurate forecasts from an incompletely calibrated formal model would be epistemically irresponsible. The validation standard is qualitative-structural.' The v2 layer is strictly weaker than that again, since all 46 of its parameters are ANALYST.
