## 3. What the analyst is asserting

This is the argued text behind this row's ANALYST numbers, quoted verbatim from sea2027/judgment.py. It is not a measurement, and it is the first thing to disagree with.

| Parameter | Value | Parameter | Value |
|---|---|---|---|
| conflict | 0.02 | ip_exit | 0.35 |
| crony | 0.60 | whitecollar | 0.45 |
| unrest | 0.10 | haven | 0.70 |
| polar | 0.18 | phys_share | 0.90 |
| party_frag | 0.05 | counter | 0.05 |
| social_frag | 0.30 | lux | 0.22 |
| protest | 0.15 | pension | 0.60 |
| labour_exit | 0.45 | ext_threat | 0.35 |

haven 0.70 is set ABOVE Thailand's even though Vietnamese bar-and-coin volume fell 24% y/y in Q1 2026 and 31% in Q2, and the reason is the Displacement paper's own third prediction. The WGC attributes the fall to domestic supply constraint with local premiums at eye-watering levels - demand revealed through price because it cannot clear through volume. Reading the volume alone inverts the signal. This is an interpretive call and it is the most arguable number in the file; run.py reports what a volume-based 0.40 does instead. Elsewhere the picture is of consolidation: the 14th Congress closed on 23 January 2026 with To Lam re-elected 180/180 to a 19-member Politburo weighted towards security and the judiciary, and a 10%-a-year growth target for 2026-30 against 8.0% actual in 2025. c5 stays very low; base_revenue_demand stays high. pension 0.60 on old-age dependency of 14.0 with 12.7% pension coverage - the inversion arrives before the institution does.

## 4. The θ25 gates

| Component | Level | Drift/yr | Threshold | Years | Status |
|---|---|---|---|---|---|
| s3 | 0.460 | -0.0088 | 0.30 [PAPER] | 18.1 | open |
| c5 | 0.190 | +0.0047 | 0.50 [FREE] | 65.6 | open |
| s5 | 0.701 | -0.0062 | 0.15 [PAPER] | 88.9 | open |
| s2 | 0.718 | -0.0028 | 0.25 [PAPER] | 167.6 | open |

**s5** — theta25 threshold gate - uncommitted revenue horizon. Degrow's voluntary/aging terminus.

**s2** — theta25 threshold gate - coercive monopoly. Degrow's violent/youth terminus.

**s3** — sccd loop L2 explosive threshold - the legitimacy death spiral becomes self-sustaining below this.

**c5** — sccd loop L3 polarisation-trap threshold. NOTE this one is a FREE parameter in the source paper - no numeric value is given anywhere in Parts I-V - so the crossing date is arbitrary in a way the S2/S5/S3 gates are not.

## 5. The eight feedback loops

## 7. Monte-Carlo measurement bands

Trajectory is a STRUCTURAL SCENARIO. Every coefficient in the six new state equations is ANALYST (spec2) and most in the original four are FREE (sccd.spec). Read curve ORDERING, slope SIGNS, and PAPER-threshold crossings. Do not read levels or dates.

## 12. Epistemic limits

CALIBRATION TAGS. CALIBRATED (PAPER parameters only): lambda, theta25, S, the regime band, Psi, L1/L2 activation, R_B, Gamma. UNCALIBRATED (at least one FREE/ANALYST parameter): C and therefore Delta and Delta_norm; L3/L4 activation; ALL of L5-L8; CAI; every trajectory; every gate projection; the attractor choice.

1 parameter(s) flip the qualitative verdict under the +/-20% OAT perturbation sccd eq (SA) mandates: d3_voluntary_thresh. A verdict that moves under a 20% nudge to an ANALYST coefficient is a hypothesis, not a finding. Read `fragility` before quoting anything.

> sccd Part V 1, verbatim: 'We do not, at this stage, claim predictive precision - generating quantitatively accurate forecasts from an incompletely calibrated formal model would be epistemically irresponsible. The validation standard is qualitative-structural.' The v2 layer is strictly weaker than that again, since all 46 of its parameters are ANALYST.
